EagleNet Registration
05/27/09 AMW

Every student computer connected to EagleNet on campus must undergo network registration. Installing the anti-virus software and software update patches provided on the CD given to freshmen at orientation will help ensure a smooth registration process.

EagleNet Registration is a web oriented scanning and registration process that was developed and integrated into the Juniata College Campus Network, EagleNet, over the Summer of 2005. This process will help to reduce the amount of virus traffic on the network as well as allow for better virus tracking.

The registration system will be available through a web page when the computer is connected to a network port on campus. It will also be required for wireless connections on campus.

Registration is required for all computers and devices that need access to the Internet and other Juniata network resources. While unregistered devices will still be able to access other unregistered devices, access to Juniata network resources and the Internet will not be available. There is also a higher chance of virus infection on the unregistered network.

Registration status is dependent on the status of updates on each computer. If a computer does not remain compliant, it will be placed into the quarantine network and only be given access to the resources that it needs in order to become compliant.

If you are using a Microsoft Windows operating system, you will be required to have all Windows Updates installed and have an updated version of your Anti-Virus software package (all main stream packages are supported). One approved package, Sophos Anti-Virus, is available from CTS at no cost to Juniata College students.

If you are using a Mac computer, your operating system level must be at 10.4.11 or later and you must have all software updates installed.

If you have a computer or device that cannot complete the online registration process, the Help Desk may be able to provide you some general direction or guidance, but will not be able to

install or uninstall software on your personal machine. It is best to check your computer before arriving on campus so you have the time and resources to get it ready for your arrival. To pre-scan your computer from off campus, you can go to https://jccm2.juniata.edu/authentication/remotescan.html. You may wish to check several times to make sure your computer is staying up to date over the summer.

After completing EagleNet Registration, please visit the CTS website and Help for more information about how to access network resources.
